

AE2104 Environmental Measuring and Monitoring 7.5 credits

Miljömätning och monitoring

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for AE2104 valid from Autumn 2007

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Built Environment, Environmental Engineering

Specific prerequisites

At least 180 higher education credits of academic studies including 35 credits in mathematics, physics, chemistry and geosciences,

AE2201 Environmental Dynamics/Physical Processes or equivalent,

AE2101 Environmental dynamics/Chemical processes or

AE2103 Environmental Aquatic Chemistry or equivalent.

Documented proficiency in English B or equivalent

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After the course is completed the student shall be able to:

- formulate, realize and analyse site investigation programmes for hydrological, hydrogeological and environmental monitoring
- Use field equipment and instruments (especially geophysical measurement techniques) for measurements of soil, water and environmental properties
- Scientifically select investigation strategies, estimate data quality and analyse and evaluate measurement data using statistical and modelling technique

Course contents

- Land and water investigation techniques
- Investigation strategies
- Formulation of monitoring programmes
- Applied measurement techniques for dynamic and static processes
- Flow measurements Field sampling techniques
- Groundwater sampling and hydraulic field tests Physical properties of soil and water
- Geophysical measurement techniques (a.o. electrical and electromagnetical measurements, seismic, ground penetrating radar, spectrometer)
- Evaluation techniques
- Statistical methods for time series and spatial analysis
- Modelling of geophysical data
- Evaluation of hydraulic tests

Course literature

See homepage three months before start of course

Examination

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

Approved written examination (TEN1; 4c) and approved exercise and laboratory course (ÖVN1; 3.5c)

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
