A, B, C, D, E, FX, F

### **Education cycle**

Second cycle

## Main field of study

**Industrial Management** 

## Specific prerequisites

Eligibility for single course students:

- A completed Bachelor's degree in Engineering, Science, Economics or Planning including at least 30 credits in Mathematics, Statistics and/or Economics and
- documented proficiency in English B or equivalent (TOEFL, IELTS e g)

#### Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

#### Intended learning outcomes

This first module provides an introduction to advanced studies in the field of economics of technological change. It both introduces a number of theoretical concepts and explain key concepts necessary to study this field. This course focuses on the determinants and characteristics of the process of industrial innovation and the implications for industrial dynamics in terms of entry, exit, growth and competition in different sectors, times and places. The course features theoretical and empirical studies of both historical and current interest, of innovation and industrial dynamics, and stresses the use of a methodology that integrates theory and history. AimThe goal of the course is that the students should learn to understand present-day innovation and technological change and their impact on the economy better, by seeking historical similarities, analogies, and, certainly also differences compared to present.

#### Course contents

- Innovation and Development
- Industrial Dynamics
- Dynamic Capabilities
- Dynamic models
- Strategic Control
- Institutional Foundations
- Industrial and Innovation Policy

#### Course literature
