

DD2370 Computational Methods for Electromagnetics 7.5 credits

Beräkningsmetoder för elektromagnetiska problem

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for DD2370 valid from Spring 2019

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Computer Science and Engineering

Specific prerequisites

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

On completion of the course, the students should be able to

• independently apply established methods for the solution of electromagnetic problems

• develop and implement numerical methods and software for differential models with finite differences and finite elements as well as integral equation models

• account for the advantages and the limitations with different numerical technologies

• use available commercial software and with consideration to basic properties and limitations of it.

Course contents

Maxwell's equations and basic concepts in electromagnetics.

Numerical methods based on discretisation with finite differences and finite elements as well as the method of moments.

Theory of convergence, stability and error analysis.

Development of software for electromagnetic problems.

Commercial software for electromagnetic problems.

Course literature

The recommended textbook is "Computational Electromagnetics" by T. Rylander, P. Ingelström and Anders Bondeson. The book is available online in KTH's electronic library.

Examination

- LAB1 - Laboratory, 1.0 credits, grading scale: P, F
- LAB2 - Laboratory, 1.0 credits, grading scale: P, F
- LAB3 - Laboratory, 1.0 credits, grading scale: P, F
- LAB4 - Laboratory, 1.0 credits, grading scale: P, F
- TEN1 - Exam, 3.5 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
