

SK1100 Physics, Basic Course II

9.0 credits

Fysik, grundkurs del II

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for SK1100 valid from Autumn 2008

Grading scale

A, B, C, D, E, FX, F

Education cycle

First cycle

Main field of study

Physics, Technology

Specific prerequisites

Recommended prerequisites: Linear algebra (SF1604) and Differential and Integral calculus (SF1600 + SF1601 or SF1602 + SF1603), SI1100 Physics I.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After the course, the student shall be able to:

- solve technical problems, relevant for the program, which are related to electrical fields, magnetic fields, mechanical waves, and electromagnetic waves
- explain physical problems, conditions, and restrictions to cooperation partners with non-technical education
- estimate size and reasonableness in physical problems
- use and understand restrictions in physical measurements and instruments
- evaluate and present physical measurements in text and in diagrams
- systematically search for scientific information in literature and scientific papers.

“Physical” in the text above, means that part of physics that is included in the main content (see below).

Course contents

Part A (Lectures)

Experimental methodology, the Scientific methodology.

Curve fitting, dimensional analysis, written technical reports.

Historical perspective on physical progress.

Basic wave concept, acoustics, waves in music instruments.

Interference and standing waves.

Basic and applied electro-statics.

Basic and applied magnetism and electromagnetism.

The electromagnetic wave.

Geometric optics, the camera, the projector, the telescope and the microscope.

Interference and diffraction with electro magnetic waves.

Polarisation.

(38h lectures, 20h seminar)

Part B (Lab course)

Four labs are carried out.

The lab experiments are normally performed in groups of three. This aims to practice group dynamics. (16h plus individual work)

Part C (Project course)

The lab experiments mentioned above are presented in front of the class and shall be directed to a non-technically educated group.

(4h seminar, individual work)

Course literature

Young and Freedman: University Physics, Pearson (the edition used will be announced on the course home page at least four weeks prior to the start of the course).

Instructions to lab experiments.

Examination

- LAB1 - Laboratory Work, 3.0 credits, grading scale: P, F
- PRO1 - Project, 1.0 credits, grading scale: P, F
- TEN1 - Examination, 5.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

Written exam in Waves (TEN1; 5 Credit, grading scale A-F).

Project work presented in class (PRO1; 1 Credit, grading scale P/F).

Passed lab experiments (LAB1; 3 Credit, grading scale P/F).

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
