Received July 5, 2005; accepted August 30, 2005

High-quality monoclinic KY(WO<sub>4</sub>)<sub>2</sub> optical waveguides were grown by liquid-phase epitaxy, and laser operation of an Yb-doped KY(WO<sub>4</sub>)<sub>2</sub> waveguide was demonstrated for the first time to our knowledge. Continuous-wave laser emission near 1  $\mu$ m was achieved with both surface and buried planar waveguides. An output power of 290 mW was obtained in the fundamental mode and the slope efficiency was above 80%. © 2006 Optical Society of America
