

Katarina Colliander, Circular Business Developer in Volvo Group, has a long experience in the automotive sector from both cars and heavy trucks side with a passion for circular economy. Katarina has for 30 years worked in different roles, from R&D, finance, sales, trade and strategy. During the last eight years, she has been part of the team creating the global trend report used within the group. She was the project leader for first collective Sustainability Strategy for the Volvo Group, one of the world's largest transport and infrastructure solution provider. Now she is in a role supporting the Volvo Group's transformation journey from a linear to a circular economy. This entails, for example, to ensure a clear definition, increase awareness and competence, cross-functional alignment and sharing of experiences, as well as performing pilots and taking part in external research projects.

She holds degree in Business Administration from University the of Göteborg, and in Mechanical Engineering.
