Cyber-Resilience
only a matter of employee training?

by Jannicke Baalsrud-Hauge
with industry insights from Ioana A.Stefan (ATS), Johann Riedel (Seamless)

DESCRIPTION_

Rapid technological progress increases both opportunities and vulnerability. Many organisations underestimate how insecure everyday digital services and AI-enabled tools are, exposing sensitive data through weak design or careless use. Drawing on theory, user needs and hands-on insights from an IT service provider and a startup developing a ransomware solution, this webinar showcases practical approaches to strengthen cyber-resilience skills.
