The ICT for Transport workshop, hosted by the ICT and Transport Research Platforms at KTH is arranged to create contacts between ICT and transport researchers at KTH and external partners.

The intention is that this workshop will lead to common research projects and research grant proposals to e.g. Vinnova for large scale “ICT for transport” projects during 2015. The projects are expected to involve external partners and both ICT and transport researchers at KTH.

The discussions will be focused on two topics, as shown below. Both ICT and transport researchers from KTH as well as external partners will participate in the discussions. Examples of participating companies and organizations are Ericsson, Samtrafiken, Scania, SICS Swedish ICT, Stockholms Stad, Sveriges Lantbruksuniversitet (SLU), Swedish National Road and Transport Research Institute (VTI), Trafikkontoret and ÅF Technology.

1. **Autonomous driving demonstration at KTH**

   *Discussion leaders: Jonas Mårtensson (Automatic control, KTH) and Petter Ögren (CVAP - Computer Vision and Active Perception Lab, KTH)*

2. **ICT for traffic control and planning**

   *Discussion leaders: Erik Jenelius (Traffic and logistics, KTH), James Gross (Communication Theory, KTH) and Mario Romero (HPCViz - High Performance Computing and Visualization, KTH)*

For questions, please contact onsten@kth.se

Please register before 27 February to reserve a place.

We are looking forward to meeting you at the ICT for Transport workshop!
