

SUSTAINABLE PLACEMAKING WEEK – 16TH AND 17TH OF MAY

KTH CAMPUS: FOLLOW THE ROUTES!

KTH ENTRÉ

At KTH Entré a new free bike rental system for students will be promoted: Grab&Bike. Students will have access to tools to fix their bikes, and a workshop on bike-fixing will also be given. A poster will be placed in this location, promoting clean transportation in Stockholm and explaining how the students can subscribe to the bike rental system. From KTH Entré colorful lines will guide students to the other event locations.

FOODTRUCK AREA

At the foodtrucks the concept of energy saving will be demonstrated by connecting them to the grid, instead of running on their engines. The campus will be brightened by placing chairs and tables on the nearby grass, so to invite people to use the green space. Near the foodtrucks a recycling bin is placed accompanied with more information on recycling and energy saving concepts.

TRIANGLE PARK

The triangular square will be the focal point of the event. The focus on this square is on how to deal with food waste. A workshop will be given where people are taught how to replant their food scraps in a very simple process. The food scraps will be obtained from a gazpacho that is made on the square and handed out for free. Also, other inspiring sustainability projects from different KTH's students will be showcased on the square: a small prototype of a wind turbine by engineers without borders, a food computer, Urban Oasis, ...

BEEHIVES GARDENS

The beehives and urban gardens are not known by many on campus, therefore they will be pointed to with clearer signs. At the KTH beehives more information is given on the importance of bees and a poster explains the concept of urban gardening, and how you can register to KTH's urban gardens.

This event has been co-created by some of the students of the Urbanism Studies master, the Centre for the Future of Places, Stipo Netherlands, Landskapslaget as well as some other KTH students engaged in sustainability issues. With the support of Akademiska Hus and the KTH Sustainability Office.
