

The KTH Transport Challenge

Background

KTH Campus is spread out and transport between different places is much needed.

The question is: How should the transport of both goods and people be performed in the future?

Evaluation

The best five concepts will be chosen by a jury and the groups will hold a presentation during March. From this five, the most suitable concept will be used for project purposes and a prototype will be built.

This will be performed as student projects within courses at KTH

Task

Design a transport concept for the KTH Campus. The transport system should be sustainable.

Your concept/solution could be system level, vehicle level or some other solution that enables sustainable transport at KTH.

The concept you produce should be on an A3 poster in pdf format. You could work either by yourself or in groups of up to five people maximum
