

# 2nd person tag

This idea is a variant of a tag game, where **you only see the live camera feed of the person you are supposed to tag**. This will require you to figure out where and who that person is. You tag someone by sneaking up and scan a QR code each person carry on their back. *This is the core gameplay.*

*Different people with different targets. Let chaos ensue!*

There are many possible scenarios where this game could work, i.e. in a room, at campus or in town. So there are many different ways to design the higher level game rules. Some potential game modes could be:

- Survival – When you are tagged you are out. Last person standing wins!
- Score – You score by tagging someone, then you get a new target.
- Zombie Survival – Survival, but the people you tag will help you.

The video stream could also be modified in different ways, for example by adding a time delay, blurring it or change the field of view.

## USPs:

- Unique out-of-body experience (exclusive to smartglasses)
- Simple and intuitive core mechanic
- Encourages social behaviour (or paranoid exclusion)
