## **Presentation/Demo Guidelines**

Each team will have a 45 minute slot (one academic hour) for the presentation on January 7. The presentation should last between 20 and 25 minutes and should incorporate the feedback that you have gotten for the midterm workshop in terms of organization (don't dive deep into some implementation detail right away. Also look at the guidelines I gave for the poster. You can follow a similar skeleton. Clearly, you should be able to talk for at least 20 minutes and not just two minutes.

We will do the presentations from 10 AM until noon and then from 1 PM until 3 PM on January 7. The order of the teams will be six, five, two, and one. Three team members will be in charge of preparing in giving the presentation (and should do so equally time wise in giving the presentation), as well as answering questions. The remaining group members will be in charge of giving the demo. All group members can participate in preparing the video.

We will have the same schedule on January 8 for the demos but we will do them in the usual meeting room 211 because it can easily accommodate the posters that you will put together using our printouts starting from 9 AM on the day. The demo should last between 20 and 25 minutes and you should really try to explain what you had done. You need to show your system actually in action from us so allow yourself some time to make sure your experimental set up works on the date of the demo. The groups will be demoing the reverse order on the presentations, that is: one, two, five, and six. I allow you to self organize in deciding who will do most of the talking for the demo. But you can count on me asking questions and directing them at all the students that are involved in a particular session. And there will be no chance for the remaining team members to help out so to say.

You will also need to upload a three-minute video of your demo to your project website. Based on what I have seen at the midterm workshop, I think you will have no difficulty with this item.
