

- Why did you choose this particular programme?

I have a great interest in energy in general and electricity in particular. The world's population is rising and the demand of renewable energy as well. Therefore there are many technical challenges and policy decision questions that in the near future that has to be handled. I want to gain experience and knowledge how to solve the problems of the future and I think KTH is one of the best places to do that.

- What are your life time goals (career related)?

Work at a company with opportunities to develop myself as a person so as of a professional engineer. I want to feel that every day at work I'm making a difference and the job I'm doing feels developing and challenge my preconception of what's technically possible. I want to work at a position at a company where I can see the broad spectrum of different questions. I want to relate electrical engineering with my interest in environmental questions and economics. At this time in my life I have an idea (or vision) as work in both the private sector as well as in politics. This might include everything from policy decision in the UN to local politics in Sweden. I've not decided if I want to work with politicians as advisor or as a politician myself (I think there is a great need of engineers in politics in general).

- What are your goals for the next 3-5 years?

Fulfill my education at KTH so as at Stockholm University. I want to gain as much experience as possible during the beginning of my professional career as an engineer.

- What are your goals for the ongoing academic year?

Pass all courses and try to understand which track and courses I want to study in the future.

- Now that you have prepared your study plan and spent a number of weeks as a master student at KTH, what has surprised you the most (positively or negatively)?

How much time it takes to study and how you always have to plan your time to be as effective as possible with my studies. I've also been a bit negatively surprised by the disadvantage it is to take 4 courses at the same time. The study load has been relatively good distributed between the courses but it's so hard keeping focus at all courses at the same time. Last but not least I'm also a bit concerned about how the courses are divided at the master programme. If you as me are going on an exchange abroad during the spring semester there is no way to take any (of the many) interesting courses that are only thought during P3 and P4. If some of the courses (if you are qualified) would be given during autumn semester instead it would be possible to maybe have another setup.
