Shamil Mehdijev

- Why did you choose this particular program?

I choose Electrical Power Engineering because I have always found it to be interesting. Since I began my bachelor education at KTH it was always clear to me what master I was going to choose. The last year in my bachelor was a year where I had to find out more about this master program and I became even more sure when I looked into it. Electrical power has always caught my attention where I would like to know more in detail how the electrical power goes from being produced to our everyday lives.

- What are your life time goals (career related)?

I would like to get a more detailed information about electricity markets and control systems where I would like to be the best in. My goal is to work in a great company or perhaps further into the future start my own company and run it, where the company would be concentrating on the electricity market or control system. I have not yet decided what subject I would like to work with so it is hard to say my life goals are.

- What are your goals for the next 3-5 years?

I want to get my master degree within the next two years and begin to work in a great company like Fortum or Vattenfall here in the Nordic countries to understand the job and get experiences. After some time I would be familiar with the market and will choose that is interesting for me. I would love to get a job in another country after I have gained some experience and knowledge about the electrical power markets. One of the places I would love to visit and work in is Dubai.

- What are your goals for the ongoing academic year?

My goals for the ongoing academic year is to pass every course with the highest grade which I will take. At the same time I would like to know what is more interesting for me, so I can concentrate on that subject and be the best in it. If I am going to work with something then I would like it to be very interesting and fun for me in the future.

- Now that you have prepared your study plan and spent a number of weeks as a master student at KTH, what has surprised you the most (positively or negatively)?

I took my bachelor degree here in KTH, which has given me plenty of time to understand the layout of the university in different courses. So there is not much that had surprised me at all. There are times when it is stressful and one has to do the different assignments to different courses at the same time and there are times when it is calm. The only thing that has surprised

me is the number of courses one must take during these two periods. Most of our courses goes over two periods which can be difficult sometimes. I would rather have 2-3 courses at the first period and the same amount of courses at the second so one can concentrate in different courses.
