Why did you choose this particular program?

I have done my bachelor program in electrical engineering. So it is easy for me to understand the advance level and I find the subject is interesting because I have to learn lot of new things and some of study materials are so familiar to me. So it is best option to me to choose this program. On the other hand, electrical engineering has very promising future and quite easy to get job if someone have better knowledge and skill about this subject well. Now world is changing so fast. Different type of energy is need for this development and research is going on to meet this energy demand. Electrical engineering field is one of them that help to meet this demand of energy. Electrical engineering field is improving, modernize and efficient day by day because of this fast developing and spread energy level. And I am also interested to do join this research and development program of electrical engineering field.

What are your life time goals (carrier related)?

My first goal is to finish my master program within two years. Then I will be looking for a suitable job. My intention is to get a job that gives me practical knowledge what I have studied before in my program as well as I want to enjoy the work that I will do. And I want to work hard to improve my professional skill and devoted employee in my work place.

What are your goals for the next 3-5 years?

My first two year goal is to complete my master program successfully. This program has lot of study and pressure of projects. I need to give more attention to do well in my program. Then I will focus my job after completing my mater program. I will give my full attention and motivation to learn and give more time to know about my profession. When I will be working any place, I will try my best to improve my skill, communication and learning area. I want to do hard work for my coming 3-5 years to see me as a better position in my profession and good human being as a person.

What are your goals for the ongoing academic years?

Now my first year first semester is going on. I have taken 29.3 credits for my ongoing academic year. I have four basic courses in this semester. I have found lot of study and pressure in this semester. So my focuses are now in my current academic year. My plan is to work hard and study well to understand my four basic courses and improve my basic level. So I have found myself in better position in my next semester.

Now that you have prepared your study plan and spend a number of weeks as a master student at KTH, what has surprised you the most (positively and negatively)?

I have seen the stuff of KTH organized everything so nicely. But one thing that made me so surprised is about course registration. Electrical engineering department is 16th in overall department ranking in the world. But course registration is total manually at first semester. I think it should be a solution because it is time consuming. Education that related to computer based should be easy and time saving for student.
