

Belonging to different research cultures

Science and Technology versus Humanities and Social Sciences

- Different dominating methods
- Ways of choosing topics for doctoral students' thesis, aim and research questions
- Researcher as soloist or team-member
- Numbers of names on publications

Educational sciences belongs to Social Sciences

How do we navigate?

Supervisors need to benefit from having PhD-students

- Names on paper or salary for supervision?
- Defined projects for PhD students as part of supervisors overarching research projects, instead of free choices (and master thesis).

But PhD students “need” to be single-author and few authors on papers.

Free choice of research topic
