- I think that the project management part of the project should be more emphasised, maybe the course could be given in collaboration together with ICS- students. A much clearer division of the

tasks to be completed is really needed. (3)

- This course is time consuming qnd woub be worth more I guess. (2)
- If more time was spent on project management, the tasks at hand would have been more evenly divided. I feel like the task- division wasnt really fair. (3)

- should have been more :) (5)
- Its much more than 12 credits (5)

12. What was the best aspect of the course

- Get to know with the reality, link between theory and real life issues.
- I can understand thoughly about the theory that I studied!
- Gaining experience in real-time implementation
- project n the DSP were good
- The learning of the DSP and implementating and bebugging a real system
- Implementing something "reel"
- Maybe another one month to finalize and perfect everything.
- i learned a lot more also about something not related at all to signal processing and about team work

13. Is there something that has not functioned well or should be removed/changed from the course

- NaN
- DSP is a little tough..
- No.
- DSps are tough
- The students should know in advance about the problems of DSP and optimizations
- It was always a hassle to come across the latest version of the code.
- Maybe new computers can be used.

14. What is your experience from working in a project group ?

- How to communicate in a multicultural environment and it is not a easy task!
- I really enjoy it!
- Project Management experience
- some gud some bad..but over all was a learning experience for me. made gud frnds.
- The overall experience was good and the it was an adequate learning expetience
- Everybody doesnt think like me...
- Learn the idea to turn theory to practice
- you have to be lucky not to be together with obsessive guys or not willing to work

15. When did you hear about the course ? Why did you choose it ?

- I chose it because I wanted to put into practise my knowledge.
 - I don't know. It seems that I need to choose this course..
 - Very useful
 - first day in @kth
 - It is part of my degree requirement
 - I heard that you would implement a actual signal system, and that you would have to build it basically from scratch. This was kind of appealing in my opinion.
 - From the website, it is my required course
 - i've read about it last summer while i was choosing the courses to take this year
 - [new search engine](http://www.cuil.com/) [url=http://www.cuil.com/]new search engine[url] [new search engine](http://www.cuil.com/) [url= http://www.cuil.com/] new search engine [url]

16. What would be your advice to a student who chooses this course next year ?

- It is imperative to have good background in C and MATLAB, otherwise you will be lost. Buy coffee. Do not be squeamish to spend sleepless nights in the lab.
 - Take it! Enjoy it! Love your team!
 - Start working hard at the first week
 - Keep the optimisation in mind when u start coding. Compilers are wierd. don,t try too much simplified stuff coding sytles. work as a team. debugging takes time plan well communicate well (Be frank!!)
 - Start early and donot take any extra courses, (its a fulltime job!!)
 - Spend more time on planning and defining the task o be completed. This is really important. Spend time on carefully designing the system, with all its functions input/output parameters. Otherwise there is no way that tasks can be done in parallel.
 - Try to start everything you can imagine in the beginning or before.
 - this is the only course you can afford in the term, if you take other courses you will not go out anymore.

17. Additional comments

- It is a relief that the project is done. I did not expect it to be so hard!
- Thanks for a good course
- Enjoy!. My best period in KTH. and the Best course I can ask for.
- It is a valuable experience.
