1. The course was useful and interesting, 1. - Don not agree at all ... 5. Agree completely

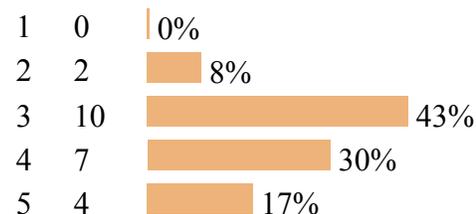

23 svarande

- It does not focus enough on the DSP part (4)
 - Lot's of experience gained in lab and project management. (5)
 - Definitely interesting (5)
 - Nice to see how things work in real life (5)
 - I learned alot. learn to use the theoretical knowledge you have (5)
 - very much practical experience c-programming (5)
-

2. The course information was good.

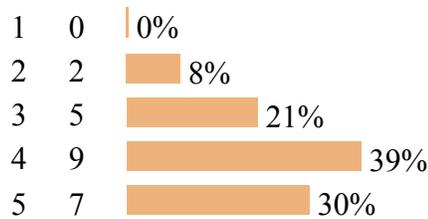

23 svarande

- We learnt everything by ourselves... (2)
- The lectures in the begining of the course were not the best... (3)
- some more lectures or introduction how to use the dsp could be usefull at the beginning of the course (3)
- Every literature provided in time. (5)

3. Your prerequisites were adequate

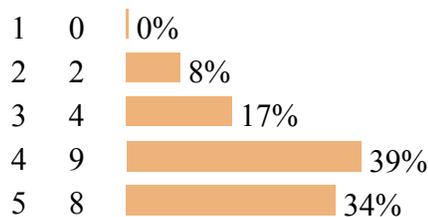

23 svarande

- Since I was in a communication theory project but not have taken those courses my theory knowledge was a bit low. Neither was i good at C programming, but i"m a lot better in that feild now... (3)
 - Not for all the course members (4)
 - I had knowledge before but now there were improved when you used them in practice (4)
 - Maybe not for everyone apparently. Why making a student carry out a digital communication system whereas he has not taken the course Advanced Digital Communication, and not even Digital Communication? (5)
-

4. S3 has given a correct description of the course. This course is what I expected.

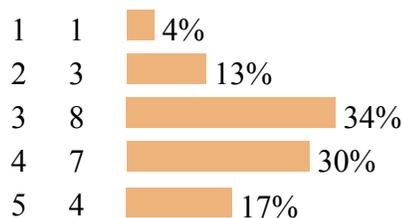

23 svarande

- japp... (5)
 - i am happy with the choice (5)
-

5. Our project assistent was good.

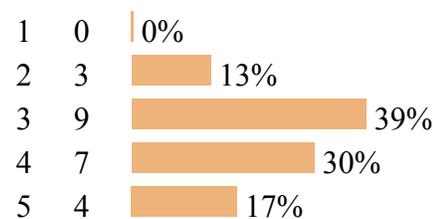

23 svarande

- No, ha did not be of any help to our group, Mark mowler (1)
 - he didn"t help that much... (2)
 - Marc Mowler (2)
 - May be some more pressure would have been necessary to motivate everybody... and some more comments on the report, poster and presentation (3)
 - seemed to be not so much interesstet in the topic, but could help with some practical issues (3)
 - Focused too much on the theoritical part (3)
 - Group red (4)
 - Henrik was great. (5)
-

6. The teacher responsible for the course was good.

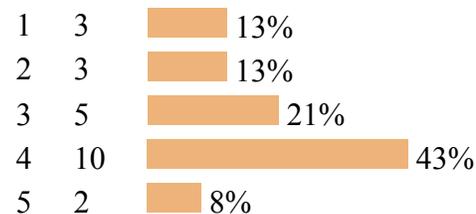

23 svarande

- Bad information and a not so good lecture. (2)
 - not really interested (2)
 - What do you mean by good? If he was helpful? (3)
 - Haven"t used him. I just have to assume that he did a good work. (3)
 - The teacher was not so important (3)
 - unfortunatell there was not so much feedback during the course (4)
 - Always available (5)
-

7. Support for computers, equipment, DSP etc. was good.

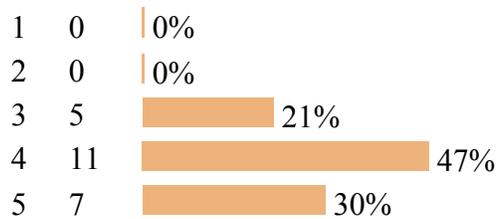

23 svarande

- Code composer hangs... (2)
- Mostly, we debugged everything alone (3)
- Many problems with DSP, maybe a better introduction to the most common problems like memory management would be good.. (3)
- Maybe to much INFO at the beginning, but I guess that learning to handle it is part of the course (4)
- CCS is not good (4)
- ok (4)

8. Manuals, books, online documentation was good.

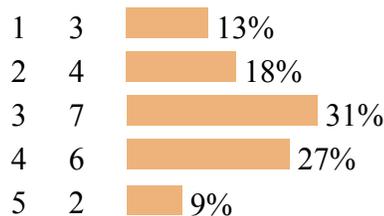

23 svarande

- I didn't read the books, online documentation good. (3)
- same as for above (4)
- good, but also a lot to study (4)
- Manuals excellent (5)

9. The equipment (PC,DSP,etc) has functioned well.

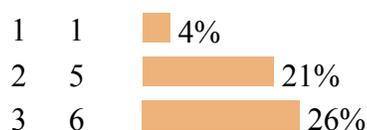

22 svarande

- the software (CCS) crashes all the time! (?)
- Throw away CCS!! (1)
- CCS is the worst software ever... (1)
- Had some problems with CCS (3)
- CCS is really unstable. Else everything worked well. (3)
- First week the dell didn't work (3)
- Code Composer is Code Composer, and I already talked about the mics. (4)
- Wireless network has not been working. (4)

10. There was enough lectures (DSP, project planning, presentation skills) at the beginning of the course.

23 svarande

4	10		43%
5	1		4%

- see q.2 (2)
- lectures are quite useless, it's twice 1hour lecture... and we are working in full time job. (3)
- Maybe we need more lecture (3)
- I only went on one (3)

11. The work load corresponds to a 8 credit course.

22 svarande

1	5		22%
2	2		9%
3	2		9%
4	5		22%
5	8		36%

- it depends on how the work is shared within the group... I think I deserve more!!! (?)
- You cannot expect people to take just this course in the forth period, maybe 10 or 12 credits would make it fair (1)
- maybe more..... (1)
- should be more (1)
- It should be 10 points, you shouldn't have to read another course at the same time. (I had to and that was bad) (1)
- Not enough for some projects (1)
- More like 12! (2)
- NO! Probaly 10-12p. should be a 10 point course so you don't have to take more courses to cover the point demand of csn... (2)
- like always S3 courses demands more then the points indicate, but it was just fun this time (3)
- Yes, very much so. The work load was heavy (5)
- even more (5)
- yaeh (5)

12. What was the best aspect of the course?

- Doing somethong practical of the thing you learned
- The coffee without sugar at 1 in the night.
- The integration of a lot of different elements
- doing a complete project with the ability of having initiatives and the teamwork
- Not having to think abt what to do when your bored.
- You worked on your own in the groups.
- The dsp implementation! Make something real!!!
- It gives a connection into the real DSP-world outside matlab.
- Working in groups, project working style

- *implementation a communication system by ourselves*
 - *Interesting. Learned much*
 - *To work in a group*
 - *The hands on approach to learn dsp handling and projecting..*
 - *practical*
 - *to use theorys in practice, good experience to code a DSP. Funny interesting projects.*
 - *Using our knowledge in a concrete project*
-

13. Is there something that has not functioned well or should be removed/changed from the course?

- *The microphones!!!! And work on the Matlab licenses for the laptops, what are they laptop for if i have to be in the lab"s network to use matlab?*
 - *No, all the aspect of the project are compulsory and needed to have a complete project.*
 - *CCS!*
 - *Very hot in the lab*
 - *not really*
 - *The lectures in the begining.*
 - *tasks should have the same at least similar burden.*
 - *No*
 - *communication at the beginning for specifications*
 - *yes! CCS!*
 - *dsp*
 - *You can take another course beside it.*
 - *Many times I had the feeling to be more a secretary than an engineer*
-

14. What is your experience from working in a project group?

- *Good, group yellow was a good group*
- *Great experience, I improved my collaborative skills*
- *Good. Everybody worked hard*
- *The group i was in had a really nice atmosphere. The tasks were well spread... very good experience*
- *Was great.. a little stressful, at times but enjoyable*
- *Is was very fun most of the time, a lot to do.*
- *This project was bad for the group working experience!!! A skilled leader has to be chosen with care or the whole group is screwed!*
- *(I was project leader) It was difficult to distribute the work load properly*
- *quite good. I have learnt more than expected.*
- *I have worked in project groups before. as always there can be some disaggrements from time to time.*
- *it was good*
- *Nice experience, but more organitazion was needed!*
- *Hard with very different people with diffrent prioritations, but it worked in the end and it gave mutch experience...*
- *Good*
- *arrange everything in time*
- *Not that good, the workload was uneven and the group suffered from bad planning + management*

- very good team work in all stages and also some outside with the course members
 - People have different background and motivation. The group should be homogenic enough, otherwise some people just teach their knowledge to others, without any feedback.
-

15. When did you hear of this course? Why did you choose it?

- The webpage
 - Last year, I chose it because it seemed a good conclusion of my studies and a good introduction to the master thesis.
 - when i had to choose a course for the period 4
 - I heard when i came to KTH. Choose it cause i wanted to learn C/DSP programming
 - I saw it on some "Öppet hus".
 - Beginning of the year! I wanted to have a taste of what was the work of an engineer!
 - s3.se
 - A friend of mine took it last year. I think that the experience is quite useful for our insertion in the job market
 - it is interesting and challenging
 - My friends did it last year and told me it was interesting. I wanted to use my theoretical skills in practice
 - dont remember
 - I liked the last year projects.
 - From previous course students...
 - I choosed it because I was never envolved in a project
 - website
 - webpage, from other s3 courses
 - october 2004. The course fits perfectly into my previous course profile and into the things I want to do in future.
 - In august. It must looks like what we will do in the industry. It can be a good preparation.
-

16. What would be your advice to a student who chooses this course next year?

- YES!
- Check the equipment first!!! The DSP responsible should play a lot with function generators and oscilloscopes, in order to be sure that he knows the data he"s playing with!!
- Have patience. Don"t stress since it will be worse and you wont make it
- You definitely need time. A project is never ended by the time of one period, so if you don"t feel working enough, you are in the wrong way!
- No advice from me except be prepared for anything.
- It a funny course.
- Chose your leader and share well the work! Then if you work enough, everything goes fine...
- do it.
- Take it! It"s funny, you learn a lot, but get ready to work a lot...
- a good choice that you will not feel regret.
- start in time, work hard from the begining, divide the parts of the project between the members, don"t try to be to involved in every part. **YOU MUST READ THIS COURSE, IT"S REALLY INTERESTING AND LEARNING**
- do not trust CCS :)

- *Don't take any other course*
 - *work hard and start early*
 - *Don't read it together with NADA:s robotics course. :-(*
 - *take the course*
 - *Don't take a digital communication system project.*
-

17. Additional comments.

- *Get away some of the deadlines in the course. In some situation they result to be quiet frustrating and make people get out of focus if they're doing something else.*
 - *Former projects are really useful. Former students/people involved in this course are sometimes more reliable than the people in the department*
 - *no*
 - *A good english language course..*
 - *thank you very much go on with this..*
-
