

BB101X Degree Project in Biotechnology; First Cycle 15.0 credits

Learning outcomes

After completion of the Degree Project the student should be able to:

1. Apply knowledge and skills acquired during the studies on issues in biotechnology
2. Formulate and attack a technical problem by applying the relevant methodology
3. Identify the need for further knowledge and continually develop the skills through advanced studies in a specific field
4. Within the project framework, be able to independently analyse the raised issues and reflect on, evaluate and critically examine their own and others' results
5. Continuously documenting a work process
6. In a professional way present the work in writing and orally for a specific audience, calling for the structure, content, citation and referencing
7. Using basic concepts and tools for an active career start
8. Design a CV and a letter of application and be able to present themselves at job interviews
9. To explain the basics of technology-based entrepreneurship
