AL230X Degree Project in Environmental Engineering and Sustainable Infrastructure, Second Cycle 30.0 credits

Examensarbete inom miljöteknik och hållbar infrastruktur, avancerad nivå

Course syllabus for AL230X valid from Autumn 19

This is a translation of the Swedish, legally binding, course syllabus.

Grading scale: P, F
Education cycle: Second cycle
Main field of study: Built Environment, Environmental Engineering

Intended learning outcomes

After a completed degree project, the student should be able to

1. show knowledge of the disciplinary foundation of the chosen subject area and best practice, an advanced understanding of current research and development work and advanced knowledge of methods.
2. demonstrate the ability to search for, collect and integrate knowledge in a comprehensive, critical, and systematic way and to identify his or her needs for further knowledge.
3. demonstrate the ability to identify, analyse, assess and handle complex phenomena, issues and situations, even with limited information.
4. demonstrate the ability to plan, and with adequate methods, carry out high-quality assignments within given time frames, as well as to evaluate this work.
5. demonstrate the ability to develop and evaluate products, processes, systems, methods or technical solutions, taking into consideration people's abilities and needs, and society's goals for economic, social and ecological sustainable development.
6. demonstrate orally and in writing the ability to, in dialogue with different groups, clearly account for and discuss his or her conclusions, including the knowledge and arguments that are the basis of such conclusions.
7. demonstrate the ability to exercise judgement, considering the relevant scientific, social and ethical aspects.
8. demonstrate the skills required to participate in research and development work or to independently work in other advanced contexts.

Course main content

The degree project should constitute a part of a specialisation within main field of study civil engineering and urban management at the second-cycle level to satisfy the requirements for the degree. This implies that the degree project should normally be carried out within Environmental Engineering and Sustainable.

Disposition

The course is designed as a delineated research project.

The course structure may include, among other things, literature studies, problem formulation, collection and compilation of data and analysis.
The degree project should be presented at a seminar. The degree project should be written and presented in Swedish or English. A summary should be included in both languages.

The Master thesis will be checked for plagiarism.

**Language of instruction**

Language of instruction is specified in the course offering information in the course and programme directory.

**Eligibility**

A main part of studies, at least 60 credits, should be completed, of which 30 credits of specialisation at an advanced level within the main field of study, before the degree project may be started.

The examiner is responsible for ensuring that special requirements are checked.

**Literature**

Relevant literature to be able to carry out the degree project

**Examination**

- XUPP - Examination, 30.0 credits, grading scale: P, F

To pass the degree project, the performance must not be unsatisfactory in any of the expected learning outcomes of the course.

**Requirements for final grade**

An approved degree project report that has been presented at a seminar.
