

MJ1001 Project Work in Energy Technology 18.0 credits

Projektarbete inom energiteknik

Course syllabus for MJ1001 valid from Autumn 08

This is a translation of the Swedish, legally binding, course syllabus.

Grading scale: A, B, C, D, E, FX, F

Education cycle: First cycle

Main field of study: Technology

Intended learning outcomes

The course provides an opportunity to further their studies in Energy Technology on the C-level. Energy technology spans a broad area of technology and projects may have very different direction.

Course main content

Students work alone or in small groups with a distinct sub-project. The sub-project may be a recess in a particular field of technology or components, which are specified in an ongoing research project. The work is led by a staff at the department.

Language of instruction

Language of instruction is specified in the course offering information in the course and programme directory.

Eligibility

General entry requirements and English language skills equivalent to B. In addition, 80 credits including 30 credits in energy technology. Swedish B is not required.

Literature

Examination

- PRO1 - Project, 18.0 credits, grading scale: A, B, C, D, E, FX, F
