SF2812 Applied Linear Optimization 7.5 credits

Tillämpad linjär optimering

Course syllabus for SF2812 valid from Autumn 08

This is a translation of the Swedish, legally binding, course syllabus.

**Grading scale:** A, B, C, D, E, FX, F  
**Education cycle:** Second cycle  
**Main field of study:** Mathematics

### Intended learning outcomes

To deepen and broaden the theoretical and methodological knowledge in linear and integer programming.  
To give training in the art of modeling and solving practical problems, and in presenting the results in talking and in writing.

### Course main content

**Theory and methods:**

**Projects:**

This part of the course consists of modeling practical optimization problems and using available optimization software to solve them. The projects are carried out in small groups. An important aspect of the course is cooperation within the group as well as presentations in talking and in writing.

### Language of instruction

Language of instruction is specified in the course offering information in the course and programme directory.

### Eligibility

Calculus, linear algebra, mathematical statistics, numerical analysis. A basic course in optimization.

### Literature

To be announced at the beginning of the course. Preliminary literature:

Linear and Nonlinear Programming by S.G.Nash och A.Sofer, McGraw-Hill, and some material from the department.

### Examination

- **PRO1** - Project, 1.5 credits, grading scale: A, B, C, D, E, FX, F  
- **PRO2** - Project, 1.5 credits, grading scale: A, B, C, D, E, FX, F
- TEN1 - Examination, 4.5 credits, grading scale: A, B, C, D, E, FX, F

**Requirements for final grade**

A written exam and projects.
