Kursplan för SG2805 gäller från och med HT11

**Betygsskala:** A, B, C, D, E, FX, F

**Utbildningsnivå:** Avancerad nivå

**Huvudområde:** Teknik

### Lärandemål

The overall aim of the course is that you should be familiar with basic concepts of satellite dynamics and control. Particular focus is placed on satellite attitude control. You should also be acquainted with the sensors and actuators used for attitude control. Finally, you should know the characteristics of propulsion systems used in space and be able to perform preliminary analysis and design of a satellite.

### Kursens huvudsakliga innehåll

The theory of attitude control is covered and discussed in relation to the sensors and actuators that are used. An overview of propulsion systems is given with an in depth treatment of a few basic concepts. The students are given a preliminary design project of a given micro satellite including attitude control, propulsion system and sensor configuration.
