

AD2862 Sustainable Urban Planning and Design Studio 1.2-Situations 15.0 credits

Hållbar stadsplanering och stadsbyggnad studio 1.2- Situationer

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for AD2862 valid from Spring 2013

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Architecture

Specific prerequisites

- * Bachelor degree in architecture, landscape architecture, or urban planning and design.
- * the previous study should include at least 30 ECTS in an art or design field.
- * or equivalent

In this interdisciplinary project, a number of places will be given to students from adjacent disciplines.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

The aim of this studio-based course is to give an introduction to design-led research in urban planning and design, and to establish a broad understanding of the complexities of macro and micro practices on economic, political, social, environmental and physical urban development. The course will train participants in analysing, visualizing and responding architecturally to urban and rural spaces as physical, cultural, political and social entities.

The studio is structured around two projects. During project 1, the studio runs parallel with the theoretical module 'Theories of Science and Research Methodologies for Planning and Design', which explores theories and methodologies for design-led research. The studio will practice and apply, test, and adapt the knowledge on theories and methods of the theoretical module focusing before all on qualitative methods, fieldwork and various interactive practices such as participative mapping, and different modes of representation. The studio will develop strategic proposals for rural and urban situations based on a thorough research process.

During project 2, the studio works in parallel with the theoretical module 'Introduction to Urban Economy Theory', which explores theories, dispositions and cultures of urban economics. The studio will take the discourse on diverse urban economies as its point of departure for proposing situated urban policies and designs for a particular region and site.

Course contents

Studio Culture: Central to the studio are the design projects, which are developed through a series of tasks and workshops. Projects involve collaborative and individual work, supported by lectures, seminars, workshops, group and individual tutorials with tutors and external consultants. The studio will guide participants as they enter into dialogue with local actors, stakeholders, and peers; engage in reflection and a contemporary and situated discourse; and sharpen their critical thinking. The studio supports participants in formulating their own positions on the topical area. The SUPD program maintains a wide international network inviting professionals for guest lectures, seminars, workshops and critiques.

Upon completion of the course, participants should be able to:

- analyse a given spatial situation in relation to its cultural, socio-economic, political and historic context taking into account issues of intersectionality (race, gender, class, power relations);
- visually and verbally demonstrate the connection and impact of different scales on urban design from micro to macro politics in respect to local, regional, national and global levels;

- develop a conceptual framework for design projects and to develop the project within this framework;
- identify and critically revisit the impact of concepts, methods and outcomes of urban designs on everyday life, and reflect on the professions ethics and responsibility;
- represent and communicate project work so that it can be understood and evaluated by external critics and other audiences.

Course literature

To be announced at course start.

Examination

- PRO2 - Project, 7.5 credits, grading scale: A, B, C, D, E, FX, F
- PRO1 - Project, 7.5 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

A-F

Students need to fulfil the following requirements in order to receive a pass (E):

- design project examination PRO1: group design resolutions (7,5 cr.)
- design project examination PRO2: individual design resolutions (7,5 cr.)

Assessment and grading (A–F) take into account both designed resolutions, written, and oral achievements throughout the course on a holistic basis. The academic quality of the individual projects influences grading to 70%, but the student's efforts and ambitions to tackle a perhaps difficult subject matter is taken into full consideration. Grading is consistent with the criteria set by Biggs, J (2003) Teaching for Quality Learning at University. Second Edition (The Open Society for Research into Higher Education & Open University Press, p 193).

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.

- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
