

# AE2302 Water Treatment Processes and Technology 7.5 credits

Vattenreningsprocesser och teknik

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

## Establishment

Course syllabus for AE2302 valid from Autumn 2014

## Grading scale

A, B, C, D, E, FX, F

## Education cycle

Second cycle

## Main field of study

## Specific prerequisites

Bachelor's degree in the field of Civil Engineering, Environmental Engineering, or another subject with clear relevance to the course, of at least 180 ECTS credits, including basic knowledge in Mathematics, Physics, Fluid Mechanics or Chemistry corresponding to at least 30 ECTS credits, including General Chemistry and/or Environmental Soil Chemistry, corresponding to at least 7.5 ECTS credits. In addition, second cycle courses for at least 30

ECTS credits, including AE2403 (or equivalent) and proficiency in English B or equivalent are required.

## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

The overall aim of the course is to give knowledge of process technology for present and future water purification and wastewater treatment, including construction, dimensioning, operation and management of treatment plants.

After the course you should be able to:

- Calculate how to construct and manage different processes involved in sustainable water and wastewater treatment.
- Apply chemical and biological knowledge that the processes are based on for use in case studies.
- Apply innovative technologies for new systems and improvement of old systems to get better function and fulfill the requirement of the society.
- Propose sludge treatment technologies.
- Use computer models for development and design of processes.
- Operate and optimize treatment plants.

## Course contents

The course presents: different processes in water and wastewater treatment in natural and constructed systems, biological treatment processes particularly for the removal of phosphorus and nitrogen, processes based on filtration and chemical precipitation, sludge treatment technologies, systems and methods for recovery of nutrients from sewage, methods for process control and optimisation.

## Course literature

Kompender och artiklar om behandlingsprocessen för vatten och avlopp, slambehandling och beräkningsmodeller.

## Examination

- TEN1 - Examination, 4.5 credits, grading scale: A, B, C, D, E, FX, F
- ÖVN1 - Assignment, 1.5 credits, grading scale: P, F
- ÖVN2 - Assignment, 1.5 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

## Other requirements for final grade

Written examination (TEN1; 4,5c)

Modelling exercise (ÖVN1; 1,5c)

Laboratory exercise (ÖVN2; 1,5c)

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
