

# AF2201 Bridge Design 7.5 credits

## Brokonstruktion

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

## Establishment

Course syllabus for AF2201 valid from Autumn 2007

## Grading scale

A, B, C, D, E, FX, F

## Education cycle

Second cycle

## Main field of study

Built Environment

## Specific prerequisites

AF2002 Betong- och stålkonstruktion (AP students)

AF2004 Concrete and Steel Structures (TISEM1 students)

## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

The aim of this course is to give basic knowledge on planning, analysis and design of bridges. After this course, the student will be able to:

- Classify different types of bridges.
- Calculate loads, lane factor, load cases and load combinations.
- Utilize influence lines.
- Explain the behaviour of beam type bridges, box girder bridges, integral bridges, arch bridges, cable supported bridges and pre-stressed concrete bridges.
- Create idealized models for analysis and evaluate forces and moments.
- Evaluate forces and moments considering large displacements (2nd order theory).
- Analyse and design an integral bridge (project task).

## Course contents

- the history of bridge construction and bridge aesthetics
- different bridge types and their behaviour
- loadings, load combinations and load distribution
- influence lines
- design of beam type bridges, box girder bridges, integral bridges, arch bridges, cable supported bridges and pre-stressed concrete bridges
- analysis and construction of integral bridges

## Course literature

Course literature includes the following (bundle cost is 400 kronor for students):

- Loads & Load Distribution on Bridge Superstructures (handouts)
- Report 109: Beam and frame structures
- Report 106: Cable Supported Structures
- Report 107: Arch Structures
- Report 119: Torsion of concrete beams
- Bridge foundations (handouts)
- Repair methods, operation & maintenance of bridges (handouts)

## Examination

- BER1 - Project, 3.0 credits, grading scale: P, F

- TEN1 - Written examination, 3.0 credits, grading scale: A, B, C, D, E, FX, F
- ÖVN1 - Exercises, 1.5 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

## Other requirements for final grade

Passed written exam (3 cr)

Passed exercises (1,5 cr)

Approved project task (3 cr)

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
