

AG2425 Spatial Databases 7.5 credits

Rumsliga databaser

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for AG2425 valid from Autumn 2019

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Specific prerequisites

For admitted students to the Master of Science in Civil Engineering and Urban Management (CSAMH) or the Master of Science in Transport and Geoinformation Technology (TTGTM): AG2412 Geovisualisation or an equivalent course.

For other students:

- A completed bachelor's degree in civil engineering, urban planning, geomatics, geography, engineering physics, computer science, statistics, economics, and/or mathematics, including at least 3 university credits (hp) in each of the following or their equivalents: Programming, Linear Algebra, Calculus in One Variable, and Probability & Statistics

- Documented proficiency in English corresponding to English B; and
- AG2412 Geovisualisation or equivalent course.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

The goals of this course are to enable students to develop a good understanding of the principles and techniques of relational database design as they apply to spatial databases; apply these principles and techniques in designing and building spatial databases; and use spatial databases to perform common types of queries and spatial analysis.

Course contents

- Logical geographic data models for spatial databases, including vector and raster model
- Physical data storage, data access methods, query processing and optimization
- Design conceptual data models for spatial databases using a ER diagram approach
- Process and retrieve geographic data from spatial databases using OGIS/SQL1999 interface and other specific interface (SDK) from database vendors
- Optimize spatial database by applying spatial indexing technologies, pyramid structure, data compressing, etc
- Basic operations of the Oracle Spatial databases and PostGIS/PostgreSQL open-source spatial database
- Introduction to modern commercial and open-source (free) spatial databases products, e.g. Oracle 10g Spatial, ArcSDE 9.x, PostGIS 1.3/PostgreSQL 8.2, etc.
- Advances and trends in spatial databases: network data model, spatio-temporal data model, spatial data mining, etc
- Guest lectures on applications of spatial databases

Disposition

Lectures 20h
Laboration 40h
Written exam

Course literature

Kurslitteraturen kommer att publiceras på kursens hemsida senast fyra veckor före kursstart.

Examination

- PRO1 - Project, 1.5 credits, grading scale: P, F
- TEN2 - Written examination, 3.0 credits, grading scale: A, B, C, D, E, FX, F
- LAB2 - Laboratory Work, 3.0 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

Other requirements for final grade

Written examination (TEN2; 3,0 cr)

Project Work (PRO1; 1,5 cr)

Laboratory Work (LAB2; 3,0 cr)

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
