

AH2923 Global Navigation Satellite Systems (GNSS) 7.5 credits

Globala satellitnavigeringssystem (GNSS)

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for AH2923 valid from Spring 2017

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Specific prerequisites

For admitted students to the Master of Science in Civil Engineering and Urban Management (CSAMH) or one of the Master of Science programmes in Transport and Geoinformation Technology (TTGTM), Aerospace Engineering (TAEEM), or Electrophysics (TELFM), there are no additional requirements.

For other students:

- A completed bachelor's degree in civil engineering, urban planning, geomatics, geography, engineering physics, computer science, statistics, economics, and/or mathematics, including at least 6 university credits (hp) in each of the following or their equivalents: Programming, Linear Algebra, Calculus in One Variable, and Probability & Statistics; and
- Documented proficiency in English corresponding to English B.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

Theoretical and practical basics of satellite positioning by the global systems: GPS, GLONASS, Galileo, etc. An introduction also to other geodetic satellite methods.

After the course, students will be able to:

- describe the principle of satellite positioning methods, the main components in a satellite navigation system and their functions
- account for and analyse the influence of different error sources on the positioning precision
- plan, perform and process precise GNSS measurements
- identify proper instruments, measurement and processing methods for different applications

Course contents

- Estimation and representation of satellite orbits
- Geodetic reference systems and time systems
- GNSS satellite signals and signal transmission through the atmosphere
- Estimation of positions with GNSS satellite observations
- Differential and relative positioning
- Carrier phase based positioning and estimation of ambiguities
- Statistical methods with Kalman filter and smoothing
- Applications of GNSS

Disposition

Lectures 24h

Examination

- TEN1 - Examination, 4.5 credits, grading scale: A, B, C, D, E, FX, F
- LAB1 - Laboratory Work, 3.0 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

- TEN1 - Written exam 4.5 credits, grading: A, B, C, D, E, FX, F
- LAB1 - Approved laboratory reports 3 credits, grading: P, F

Other requirements for final grade

Examination, approved laboratory work

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
