## Intended learning outcomes

Participating students should after the course be able to:

- Describe and analyze what different sources of information that is necessary in order to make a credit risk assessment.
- Describe how an active credit culture can influence the credit risk assessments made within an organization.
- Conduct different types of credit risk assessments using relevant key ratios.
- Explain and construct quantitative models and use these to make credit risk assessments.
- Synthesize the development of financing over time and how the financial market currently operates, in reflection of the increased usage of financial derivatives.
- Describe and analyze the differences between assessing consumers, small businesses and large corporations.
- Describe why there are differences between assessments made by banks, funds, investment companies and venture capital/business angels.
- Explain how the psychology of credit risk assessment affects the credit risk management processes.

## Course contents

The objective of the course is to provide the student with knowledge regarding how to conduct accurate credit risk assessments. The knowledge is important for operations all over the financial industry and for understanding credit risk management. Credit risk assessment concerns how financial corporations analyze risk and thereby customers. The course both analyzes qualitative and quantitative ingredients in the credit risk assessment process. The course also analyzes the differences between different business actors in appreciating risks, such as banks and venture capitalists/business angels. The psychology of credit risk assessments is also a part in the course.

## Course literature

Caouette, J.B., Altman E.I., Narayanan P. och Nimmo R.W.J., 2008, Managing Credit Risk, Wiley: New York.

Ett antal artiklar kommer också att delas ut i samband med föreläsningar.
