## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

The overall objective of the course is to provide knowledge of the property legal regimes that underpin the development and change of land use, real estate and land-related rights, as well as on how the interaction of different types of infrastructure can be organized

More specifically, after reading this course student shall be able to:

- Explain and describe the meaning of different land legal concepts
- Identify and evaluate different technical legal solutions to solve practical problems related to land use, land subdivision and land-related rights and cooperation between real properties.
- Apply relevant legislation in simpler situations related to change in land use, property division and land-related rights and cooperation between real properties.
- Describe the main features of the infrastructure legislation on roads, railways and power lines, and explain how the acquisition and granting of land rights for these facilities takes place
- Reflect on the importance of a functioning legal system, property rights and property division to meet the needs of society for a long term and sustainable land use.

## Course contents

The course covers the technology surrounding the design and alteration of buildings and building systems. The property -land with associated buildings and equipment - is of fundamental importance in the community, acting as a legally well-defined and limited geographical concepts. Legislation in the area intended to ensure adherence both long-term and flexibility in terms of land use, land transfers and leases of land and land-related rights. Real estate serves as collateral for loans and therefore also a key part of the economy.

The course covers the importance of and the relationship between property division, land-related rights, and sustainable land use. In the course, special emphasis is placed on the Real Property Formation Act and the Joint Facilities Act, but the Expropriation Act including compensation and valuation rules is also covered, as well as infrastructure legislation for utilities, roads and railways.
