

CH2014 Chemical and Microbiological Risk Management in the Work Environment 7.5 credits

Hantering av kemiska och mikrobiologiska arbetsmiljörisker

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

On 2021-10-15, the Head of School of CBH has decided to establish this official course syllabus to apply from autumn semester 2022 (registration number C-2021-2094.).

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Technology and Health

Specific prerequisites

- Academic first degree, 180 higher education credits in engineering or natural sciences or equivalent education and English language skill equivalent to English B/English 6. 15 credits in mathematics or statistics.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

The overall aim is to provide knowledge about chemical and microbiological risk management and ability to apply this knowledge on different types of chemical and microbiological risks at the workplace to prevent health effects and accidents.

The course will provide knowledge within the following topics and ability to use the knowledge in problem-solving:

- Legislation concerning chemicals and microorganisms.
- Impact on health and safety.
- Risk assessment including measurement of air contaminants
- Control measures that reduce exposure and risks of accidents, through technical and organisational design of work, and workplaces.
- Adaptation of control measures to the workplace.

By the end of the course, the students should be able to:

1. Describe, exemplify, and explain how all the above-mentioned factors affect safety, health, well-being, and performance.
2. Perform measurements and risk assessments relating to all the above-mentioned factors in order to assess exposure and to be able to propose control measures that eliminate or reduce the exposures. The capability to perform measurement involves knowledge about measuring methods as well as measurement strategies.
3. Describe, discuss, and critically analyse the advantages and limitations of different measuring strategies and be able to interpret and draw conclusions from measurement results.
4. Propose work environment improvements according to the hierarchy of prevention and control concerning the above-mentioned factors
5. Critically discuss risk assessments and control measures in relation to relevant work environment regulations.
6. Describe the EU regulations and Swedish legislation and provisions for all the above-mentioned factors.
7. Find and interpret information about health hazards with chemical products and substances and use this information in risk assessment of handling of and exposure to chemicals.
8. Describe common microbiological risks, in what environments they occur, how such risks can be assessed and how they can be controlled.

9. Describe the demands on employers regarding chemical risks and be able to support organisations and adapt the methods to the organisation's needs and prerequisites.

10. Be able to identify barriers and facilitators for implementation of work environment improvements and to discuss pros and cons of different control measures and strategies.

Course contents

- Work environment regulations
- Chemical and microbiological risks
- Risk assessment
- Measurement methods and measurement strategies
- Control measures
- Intervention

Examination

- RED1 - Project work, 2.5 credits, grading scale: P, F
- TEN1 - Written exam, 4.0 credits, grading scale: A, B, C, D, E, FX, F
- ÖVN1 - Exercises, 1.0 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
