

CK2180 Polymer Materials in a Circular Economy 7.5 credits

Polymera material i en cirkulär ekonomi

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for CK2180 valid from Autumn 2023

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Chemical Science and Engineering

Specific prerequisites

At least 150 credits from grades 1, 2 and 3 of which at least 110 credits from years 1 and 2, and bachelor's work must be completed, within a programme that includes:

50 university credits (hp) in chemistry or chemical engineering, 20 university credits (hp) in mathematics and in computer science or corresponding.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After passing the course the student should be able to:

- Describe basic concepts connected to polymer material circularity and reflect over their role in a circular economy.
- Reflect over the sustainability of polymer materials and their contribution to sustainable development.
- Understand how life cycle analysis and sustainability metrics can be utilized in development of sustainable polymer materials
- Perform literature search and laboratory experiments. Evaluate and discuss results orally and in a written report.

Course contents

Polymer materials in a circular economy. Biobased, biodegradable and/or recyclable polymer materials.

Principles of different recycling methods. Challenges and possibilities for different recycling methods and material types (e.g. thermoplastics, thermosets, composites, textiles, biodegradables, multicomponent materials).

Design for recycling at molecular, material and product level. Cradle-to-grave and cradle-to-cradle design. Current state and future opportunities.

Biodegradation and role of biodegradable plastics in circular economy.

Polymer materials and sustainability, environmental, social and economic aspects.

Life-cycle analysis and sustainability metrics.

Examination

- LAB1 - Project Laboratory Work, 3.0 credits, grading scale: P, F
- SEM1 - Seminar, 1.5 credits, grading scale: P, F
- TEN1 - Written exam, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
