DD1325 Applied Computer Science with Ethics 7.5 credits

Tillämpad datalogi med etik

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

The official course syllabus is valid from the Spring semester 2022 in accordance with Head of School decision: J-2021-2307.Decision date: 14/10/2021

Decision to discontinue this course

The course will be discontinued at the end of the Autumn semester 2023 according to the Head of School decision: J-2021-2307.Decision date: 14/10/2021The course is given for the last time Autumn semester 2021. The last opportunity for examination in the course is given in the Autumn semester 2023.The examination is conducted during the transition period within the framework of the course DD1326. The course modules in DD1325 are replaced by course modules in DD1326 with the same name.

Grading scale

A, B, C, D, E, FX, F

Education cycle

First cycle

Main field of study

Technology

Specific prerequisites

Knowledge and skills in basic programming, 6 higher education credits, equivalent to completed course DD1310/DD1311/DD1312/DD1314/DD1315/DD1316/DD1318/DD1331/DD100N/ID1018.

Active participation in a course offering where the final examination is not yet reported in LADOK is considered equivalent to completion of the course.

Registering for a course is counted as active participation.

The term 'final examination' encompasses both the regular examination and the first re-examination.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After passing the course, the student shall be able to

- systematically test programs to discover errors
- use abstraction as a tool to simplify the programming
- select an appropriate algorithm to a given problem
- compare algorithms with regard to time and memory usage
- describe algorithms for searching and sorting and their properties
- formulate and implement recursive algorithms
- write a small BNF syntax (less than 10 rules) for a formal language and write a program that examines whether an expression follows a BNF syntax
- model problems as search problems and implement algorithms for breadth-first search, depth-first search and best-first search
- describe basic compression algorithms and for which types of compression they are used
- design an automaton for text search and describe how it is working
- implement stacks and queues and use these
- implement insertion, traversal, and search operations for binary search trees and general trees and use these
- implement hash tables and hash functions and use these
- use priority queues
- use simple encryption methods and explain the principles of asymmetric encryption
- identify problems where the data structures above are useful and design simple algorithms with these

- analyse and evaluate ethical consequences of computer science applications

in order to

- become a good problem solver using programming
- be able to use computational methods in application projects
- acquire sufficient prior knowledge to be able to take advanced courses in computer science.

Course contents

In this course, the students will develop their knowledge of algorithms, data structures and programming. The programming language used in the course is Python.

Algorithms and data structures: A systematic overview of the concepts abstract data types, stacks, queues, lists, trees, searching, sorting and recursion based on the knowledge the students acquired in the course Programming Techniques. Hashing. Priority queues. Search trees. Problem trees. Text searching. Simple syntactical analysis. Algorithm analysis. Cryptography.

Programming: Program quality. Abstraction. Modularisation. Testing. System calls. Standard modules.

Basic ethics: Fundamental ethical concepts, computer ethics.

Examination

- ETIK - Ethics assignments, 1.5 credits, grading scale: P, F
- KONT - Partial exams, 3.0 credits, grading scale: A, B, C, D, E, FX, F
- LABD - Programming assignments, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

For higher grades on KONT, oral examination is used.

Transitional regulations

TEN1 has been replaced by KONT.

The examination is conducted during the transition period within the framework of the course DD1326. The course modules in DD1325 are replaced by course modules in DD1326 with the same name.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
