

# DD2380 Artificial Intelligence

## 6.0 credits

### Artificiell intelligens

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

### Establishment

On 2021-04-15, the Head of School of EECS has decided to establish this official course syllabus to apply from the spring semester 2021 (registration number J-2021-0714).

### Grading scale

A, B, C, D, E, FX, F

### Education cycle

Second cycle

### Main field of study

Computer Science and Engineering

### Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

### Intended learning outcomes

After passing the course, the student should be able to

1. apply different principles of Artificial Intelligence (AI)
2. choose appropriate tools and implement efficient solutions to problems in AI
3. integrate tools to design computer programs that show different properties that are expected by an intelligent system
4. present, analyse, and entitle an own solution to an AI problem
5. reflect on and discuss current social and ethical aspects of AI

in order to be able to

- draw use of methods of artificial intelligence in analysis, design and implementation of computer programs
- contribute to design of an intelligent system in both academic and industrial applications.

## Course contents

The following fields are treated within the scope of the course: problem-solving with search algorithms, heuristics, knowledge representations (logic), planning, representation of uncertainty and inference (Bayesian networks, HMM), decision theory and utility theory, diction (NLP).

## Specific prerequisites

- Knowledge in linear algebra, 7,5 credits, corresponding to completed course SF1624/SF1672.
- Knowledge in calculus in one variable, 7,5 credits, corresponding to completed course SF1625/SF1673.
- Knowledge and skills in programming, 6 credits, corresponding to completed course DD1337/DD1310/DD1311/DD1312/DD1314/DD1315/DD1316/DD1318/DD1321/DD1331/DD100N/II
- Knowledge in algorithms and data structures, 6 credits, corresponding to completed course DD1338/DD1320/DD1321/DD1325/DD1327/DD2325/ID1020/ID1021.

Active participation in a course offering where the final examination is not yet reported in Ladok is considered equivalent to completion of the course.

Registering for a course is counted as active participation.

The term 'final examination' encompasses both the regular examination and the first re-examination.

## Examination

- LAB1 - Labs, 4.0 credits, grading scale: P, F
- RAP1 - Report, 0.5 credits, grading scale: P, F
- TEN2 - Written exam, 1.5 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

## Transitional regulations

The earlier course moment TEN1 is replaced by TEN2 and RAP1.

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
