

# EG2100 Power System Analysis

## 6.0 credits

### Analys av elkraftsystem

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

### Establishment

The official course syllabus is valid from the autumn semester 2024 in accordance with the decision from the director of first and second cycle education: J-2024-0704. Decision date: 2024-04-05

### Grading scale

A, B, C, D, E, FX, F

### Education cycle

Second cycle

### Main field of study

Electrical Engineering

### Specific prerequisites

Knowledge in algebra and geometry, 7.5 higher education credits, equivalent to completed course SF1624.

Knowledge in one variable calculus, 7.5 higher education credits, equivalent to completed course SF1625.

Knowledge in multivariable analysis, 7.5 higher education credits, equivalent to completed course SF1626.

Knowledge in Matlab, 1.5 higher education credits, equivalent completed course SF1519/SF1546/EL1150.

Knowledge in Electric Power Systems, 6 higher education credits, equivalent completed course EJ1200.

Active participation in a course offering where the final examination is not yet reported in LADOK is considered equivalent to completion of the course. Registering for a course is counted as active participation. The term 'final examination' encompasses both the regular examination and the first re-examination.

## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

After passing the course, the student shall be able to

1. create mathematical models, analyse and carry out calculations for an electric power system under symmetrical as well as unsymmetrical conditions in steady state, and for load flow analysis.
2. carry out the above-mentioned calculations numerically in Matlab and present and discuss received numerical results.

## Course contents

Fundamental principles for power system analysis, methods for analysis and design of power networks in steady state under symmetrical as well as unsymmetrical conditions.

## Examination

- PRO2 - Project, 6.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

PRO2 also includes an oral examination.

## Transitional regulations

Students who have not completed the course with the earlier examination should follow the new examination rules. However, final mark is given, and credit for the earlier test parts TENC and percent about a a Pass grade are received from the re-examination PRO1.

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
