

# **EH2770 IT Management with Enterprise Architecture I 7.5 credits**

## **IT-Management med Enterprise Architecture I**

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

## **Establishment**

Course syllabus for EH2770 valid from Spring 2013

## **Grading scale**

A, B, C, D, E, FX, F

## **Education cycle**

Second cycle

## **Main field of study**

Electrical Engineering

## **Specific prerequisites**

Single course students: 120hp and English B or equivalent.

# Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

Upon completion of this course the participants should be able to:

- Describe and explain components of an IT-system.
- Describe and explain different types of IT-systems that organizations utilize for support of their business.
- Choose among and apply existing IT-system modeling languages.
- Create new IT-system modeling languages.
- Describe and explain how organizations can use IT-systems in a rational and cost efficient manner.

## Course contents

The course consists of, and is examined by, five assignments with the following preliminary content, the final assignments will be presented at the beginning of the course:

- General modeling – The student should, given a previously well known area, create a modeling language that can be used to describe the area.
- Adaptation of modeling language – The student should, given the entities of a modeling language, identify and describe plausible relations between the entities.
- Views – The student should, given an enterprise architecture framework and a modeling language, identify which entities of the language that is relevant in different parts of the framework.
- Refinement of modeling language – The student should, given entities in a modeling language, describe instances of these entities.
- Enterprise architecture modeling – the student should model the complete IT support for a specific organization.

Lectures will be given in order to introduce the students to the assignments and the topic in general. The assignments will be presented in the seminars and handed in as written reports.

## Disposition

The course consists of lectures and seminars, where the theoretical aspects are presented and discussed. The project assignment, carried out in groups of two students, constitutes a large part of the course.

## Course literature

Annonseras slutgiltigt vid kursstart.ExempelvisLankhorst, M., Enterprise Architecture at Work: Modelling, Communication and Analysis 2nded., Springer, 2009.

## Equipment

No requirements, but a laptop is beneficial for the exercises.

## Examination

- INL1 - Assignment 1, 1.5 credits, grading scale: P, F
- INL2 - Assignment 2, 1.5 credits, grading scale: P, F
- PRO1 - Project Assignment, 3.0 credits, grading scale: P, F
- SEM1 - Lecture Series, 1.5 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

The course consists of three assignments, where the final, PRO1, is more extensive project assignment.

## Other requirements for final grade

Approved exercises (INL1 + INL2 + PRO1)

Approved attendance (SEM1)

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
