

EI2405 Classical Electrodynamics 7.5 credits

Elektromagnetisk fältteori, fortsättningskurs

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for EI2405 valid from Spring 2019

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Electrical Engineering

Specific prerequisites

The courses EI1200 Electromagnetic Field Theory and EI1210 Wave Propagation & Antennas, or the course EI1240 Electromagnetic Theory or equivalent knowledge of Eng B or equivalent. "

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After completion of the course the student shall be able to

1. explain Green's theorem; describe Green functions to Poisson's equation
2. expand Green functions in orthogonal bases to solve electrostatic and magnetostatic boundary value problems
3. do multipole expansions of electrostatic and magnetostatic fields
4. elaborate on the physical implications of Maxwell's equations
5. describe Green functions to the wave equation
6. calculate the retarded fields from continuous sources and point charges
7. explain and use conservation laws for energy, momentum and angular momentum
8. analyze propagation, reflection and transmission of plane waves
9. describe the covariant form of Maxwell's equations and apply the Lorentz transformation to 4-vectors and the field tensor

Course contents

Mathematical methods for electrostatic and magnetostatic source and boundary value problems. Electromagnetic fields from time-dependent source distributions. Interaction between electromagnetic fields and media. Special theory of relativity applied to electromagnetics.

Disposition

Lessons and problem solving activity.

Course literature

Jackson J.D., **Classical Electrodynamics**, 3rd ed., Wiley, 1998.
ISBN 0-471-30932-X

Examination

- TEN1 - Examination, 7.5 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

Required score from problem solving activity and written exam.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
