

EL282U Modelling of Dynamical Systems 7.5 credits

Modellering av dynamiska system

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for EL282U valid from Autumn 2023

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Electrical Engineering

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After passing the course, the student should be able to

- formulate basic theory and definitions of important concepts in mathematical modelling of dynamic systems

- retrieve mathematical models for engineering systems based on fundamental physical relations and based on measurement data.

Course contents

- model types
- overview of different physical domains (physics, mechanics, electronics)
- model simplification, differential-algebraic equations
- systematic modelling methods
- object-oriented modelling
- disturbances and disturbance models
- parameter estimation and statistical properties

Examination

- LAB2 - Lab 2, 0.5 credits, grading scale: P, F
- LAB3 - Lab 3, 2.0 credits, grading scale: P, F
- LABA - Lab 1, 2.0 credits, grading scale: P, F
- TENA - Written examination, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
