

F1L5202 High Performance Concrete Structures 7.5 credits

Högpresterande betongkonstruktioner

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for F1L5202 valid from Spring 2017

Grading scale

Education cycle

Third cycle

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After completing the course the student should be able to describe for the function of and design methods for high performance concrete structures.

Course contents

The course can be a theoretical or experimental study or it can be a literature review of a course book.

Specific prerequisites

Master of Science in structural engineering and admission to postgraduate level

Course literature

Announced before the course starts.

Examination

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Written project report

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
