

# FSI3300 Theoretical Particle Physics 7.5 credits

### Teoretisk partikelfysik

This is a translation of the Swedish, legally binding, course syllabus.

#### **Establishment**

# **Grading scale**

G

## **Education cycle**

Third cycle

## Specific prerequisites

Relativity Theory. Advanced Quantum Mechanics. Relativistic Quantum Physics (recommended).

## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

After completed course, the PhD student should be able to:

- know and describe the standard model of particle physics.
- compute decay rates and cross-sections with help of relativistic kinematics.
- use symmetries to restrict the form of the S-matrix, for example, isospin, discrete symmetries, and spacetime symmetries.
- give an account of and describe the static properties of the hadrons from the quark model.
- know the basic principles of the electroweak theory.
- have knowledge about how deep inelastic scattering shows the existence of quarks in the nucleons.
- know about basic neutrino physics and describe neutrino oscillations.

#### Course contents

Introductory survey. Conservation laws. Basic reaction theory. Feynman diagrams. Lorentz invariance. One particle states. Binary reactions. Determination of mass. Scattering theory (the S-matrix, decay rate, scattering cross-section). Symmetries. Time-reversal. Space-reflection. Charge conjugation. The tensor method for determination of spin and parity of particles. Isospin. Strangeness. The quark model. Color. Hadron spectroscopy. Quarkonium. Electroweak interaction of quarks. The Higgs mechanism. Deep inelastic scattering. Neutrino physics. Neutrino oscillations.

## Course literature

There is no course book, but there are several books that can be used:

- W.N. Cottingham and D.A. Greenwood, An Introduction to the Standard Model of Particle Physics, 2nd ed., Cambridge (2007)
- D. Griffiths, Introduction to Elementary Particles, Wiley (1987)
- F. Halzen and A.D. Martin, Quarks and Leptons, Wiley (1984)
- Q. Ho-Kim and X.-Y. Pham, Elementary Particles and Their Interactions Concepts and Phenomena, Springer (1998)
- A. Seiden, Particle Physics A Comprehensive Introduction, Addison-Wesley (2005)
- H. Snellman, Elementary Particle Physics, KTH (2004)

## **Examination**

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

# Other requirements for final grade

Hand in assignments and an oral exam.

# Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
