Education cycle

First cycle

Main field of study

Technology

Specific prerequisites

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After the student has completed the course he/she manages:

- To arrange and apply calculation methods based on direct as well as on indirect costs, to execute prime cost calculations, and utilize calculation models based on direct variable costs as well as on marginal costing.
- To evaluate in which situation calculating prime costs or marginal (direct) costing, respectively, is the preferable method.
- To organize and apply the capitalized value method, the yield method, and the fixed annual installment method.
- To analyze and explain at which type of long-term investments a combination of methods will bring about the most useful basis for decision-making, to report results of completed calculations with sensitivity estimates as well as with recommendations.
- To find information about legal regulations and prescriptions with regard to small-scale business on the basis of an acquired overview of sources of relevant information.
- To formulate a business plan, containing business concept, calculations, and relevant estimates.

Course contents

The course provides knowledge about how business calculation is built up and is used in started new companies as well as in older established companies, where the infrastructure often is partly given.

Practical work with product and investment calculations in the short-run as well as in the long run is carried out with cases from different companies in different branches.

Updated qualitative and quantitative business calculation methods, that are used in technology oriented companies, are analyzed, compared, and evaluated.

The process of creating and developing a business concept and implement it to an adequate market is studied. Different motives and impelling forces behind new companies are analyzed.
