

IK1330 Wireless Systems 7.5 credits

Trådlösa system

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for IK1330 valid from Spring 2014

Grading scale

A, B, C, D, E, FX, F

Education cycle

First cycle

Main field of study

Electrical Engineering, Technology

Specific prerequisites

Completed upper secondary education including documented proficiency in Swedish corresponding to Swedish B and English corresponding to English A. For students who received/will receive their final school grades after 31 December 2009, there is an additional entry requirement for mathematics as follows: documented proficiency in mathematics corresponding to Mathematics A. And the specific requirements of mathematics, physics and chemistry corresponding to Mathematics D, Physics B and Chemistry A.

30 HEC in mathematics

15 HEC in communication systems

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

This course provides an overview of wireless systems. It describes the basic design of radio links and radio networks, and describes the system architecture and function of different existing standards for wireless systems.

To pass, the student should be able to:

- Give an overview how a fading radio channel affects the link performance of wireless communication systems.
- Dimensioning a radio link in terms of range and channel capacity based on given conditions
- Explain how multiple access methods works.
Calculate the capacity of radio networks using simple models
- Give an overview of the system architecture of the various existing wireless communication systems.
- Explain, in a wide sense, the environmental and sustainability challenge of the ICT-industry. (Electromagnetic radiation, energy, limited natural resources, environmentally harmful effects).

For the highest grade, the student should be able to:

- Explain wavepropagation mechanisms and make judgments based on how these mechanisms affect the wave propagation.
- Solve a general design problem for the radio links and radio networks by using simple formulas
- Given an overview of various existing systems for wireless communications and compare the capacity, performance and environmental aspects of them.
- Be able to judge the economic and social advantages of providing affordable telecommunication in relation to its environmental effects.

Fullfilling partsof the learning outcomes ofthe highest graderesults ingradesD to B.

Course contents

Channel capacity, transmission, multiplexing, Antennas, wave propagation, fading, Digital Modulation, Spread spectrum FHSS, DSSS, Multiple accesss FDMA,

TDMA, CDMA, OFDMA, Error detection and error correction, Wireless networks using standards for cellular mobile broadband systems, wireless LAN, sensor networks and PAN. Environmental, social and economic effects of wireless systems.

Course literature

Wireless Communications & Networks, Stallings, William Upplaga: 2:a, Förlag: Prentice Hall År: ISBN: 0-13-196790-8

or similar books.

Examination

- INL1 - Problem Assignments, 4.5 credits, grading scale: A, B, C, D, E, FX, F
- LABA - Laborative Work, 1.5 credits, grading scale: P, F
- SEM1 - Seminars, 1.5 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

Passed Seminars (TEN1; 1,5 HEC credits, Grade P/F).

Passed laboratory work (LAB1; 1,5 HEC credits, Grade P/F).

Passed Problem assignments (INL1: 4,5 HEC, Grade A-F).

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
