

KE1150 Engineering Chemistry

10.0 credits

Teknisk kemi

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for KE1150 valid from Autumn 2023

Grading scale

A, B, C, D, E, FX, F

Education cycle

First cycle

Main field of study

Technology

Specific prerequisites

The upper-secondary school before 1 July 2011 and adult education at upper-secondary level before 1 July 2012

Specific entry requirements: mathematics E, physics B and chemistry A. The grade Passed or 3 inn each of the subjects is required .

The upper-secondary school from 1 July 2011 and adult education at upper-secondary level from 1 July 2012 (Gy2011)

Specific entry requirements: Physics 2, Chemistry 1 and Mathematics 4. Minimum requirement is a pass grade.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

For a passing grade, students must be able to:

- Balance chemical reaction formulas and perform stoichiometric and thermochemical calculations.
- Define and use material and energy balances.
- Perform simple chemical laboratory work, considering the working environment and safety regulations.

Course contents

Stoichiometry, thermochemistry, kinetics, material and energy balances:

- balanced chemical reaction formulas.
- stoichiometric and thermochemical calculations.
- rate expressions defined based on chemical elemental reactions.
- simpler calculations on chemical equilibrium and reaction kinetics.
- the important tools material and energy balances - adapt the basic form of these to a given process and solve the resulting system of equations.
- models for material and energy balances for different design alternatives, combine and apply these models in problem solving and use tables for enthalpies, specific heat, and other material data to help with calculations.
- description of and examples of processes such as continuous/batch process, stationary/non-stationary process, open/closed system, as well as the concepts of excess air, recirculation ratio, total turnover, yield and selectivity.
- apply a system thinking to problems of a chemical technical nature and identify the system delimitation to which the problem applies and choose system boundaries so that the problem becomes solvable based on given information.

Lab course:

- simpler chemical laboratory work, considering the working environment and safety regulations.

Examination

- LAB1 - Laboration, 2.0 credits, grading scale: P, F
- TEN3 - Written exam, calculations, 3.0 credits, grading scale: A, B, C, D, E, FX, F
- TEN4 - Written exam, calculations, 5.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

To pass the course the student must pass the examinations (TEN1, TEN2 and period 2) and pass the laboratory course (LAB1, period 1).

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
