Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

On completion of the course, the student should be able to:

- use the latest theory in the area of valuating companies
- value a company by means of the individually built cash-flow model, including to make an advanced strategic and financial analysis of a technology-based company to build a computer-based valuation model with all necessary functions to make this analysis.
- have good knowledge of other valuation approaches, particularly multiple valuation
- produce a valuation report meeting the professional standards of the financial market.
- demonstrate good ability to account for what that influences the value of a company
- and have good understanding of the practical problem that is associated with values of company.

Course contents

The course consists of lectures, guest lectures, model construction with seminars and with a technology-based company as the valuation project. The aim of the lectures is to provide theoretical knowledge about different models and how they can be used, as well as guidance in practical model construction. The guest lectures mainly intend to give an insight in how financial departments, and consultants work. Main fields of study that are treated are:

- Cash-flow models
- Models for comparing values.
- Strategic and financial analysis of technology-based companies.
- Shareholder value, values of venture capital/private equity financed companies

Disposition

The course contains a number of mandatory lectures and tutorials.
