

MF2005 Innovative Design I

12.0 credits

Innovativ konstruktion I

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

Establishment

Course syllabus for MF2005 valid from Autumn 2008

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Specific prerequisites

The layout of this course requires that the compulsory courses for the chosen specialization have been conducted.

Compulsory for
IDE(P4)

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After completing this course you will be able to:

- Design and detail simple mechanical products based on engineering reasoning and considerations
- Apply earlier acquired knowledge within e.g. mechanics, solid mechanics, electrical engineering and product development.
- Develop and estimate loads as a basis for dimensioning of structure elements as well as selection of machine elements
- Dimensioning of simple machine elements such as flanged bearings; shrink fits belt- and chain transmissions
- Apply basic criteria for designing products considering e.g. load lines, load distribution, adaptation for manufacturing.
- Select material and components from sub supplier's catalogs for design of simple products.
- Produce detailed drawings including manufacturing tolerances for simpler system products.
- Describe what characterizes an innovation
- Explain what demands that need to fulfilled to obtain a patent

Course contents

This course deals with an applied subject where earlier acquired knowledge is applied and integrated with new theory being presented. The curriculum can be divided into four main parts:

- Innovations, entrepreneurship, patents
- Design structures
- Load carrying structures, applying loads
- Load lines, stress concentrations
- Material selection
- Manufacturing adaptation
- Documentation and communication
- Technical drawings
- Dimensioning, tolerances
- Systems design
- Prime movers
- Transmissions

- Joints

The theoretical content is presented at the lectures and is applied in an assignment and a project. The project work is accomplished in groups of 3-5 students.

Disposition

Period 1, 2
Lectures 24h
Tutorials 96h

Course literature

Konstruktiv utformning, Del 1 – Syntes , Sundström, Bjärnemo, Andersson, Lunds Tekniska Högskola 2000,

Konstruktiv utformning, Del 2 – Analys, Bjärnemo, Helmer, Lunds Tekniska Högskola 2001,

Rittekniska grunder, Folkesson, Anders, KTH, Maskinelement 2006.

Maskinelement, Olsson, Karl-Olof, Liber Förlag 2006.

Examination

- INL1 - Assignments, 3.0 credits, grading scale: P, F
- PRO1 - Project, 6.0 credits, grading scale: P, F
- TEN1 - Examination, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

Other requirements for final grade

To pass this course requires an approved assignment (INL1; 3hp), an approved project (PRO1; 6hp) and an approved written examination (TEN1; 3hp)

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
