

MJ2691 Technology and Sustainable Development 6.0 credits

Teknik och hållbar utveckling

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for MJ2691 valid from Autumn 2009

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Environmental Engineering

Specific prerequisites

At least 120 academic credits (ECTS) in a program of engineering or natural science or course MJ1502 or MJ2611 or MJ2652 or MJ2651 or corresponding knowledge

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

The overall objective in this course is to give an introduction to the field of sustainable technologies.

After concluding this course the student should be able to:

- Describe and explain different concepts as eco-efficiency, resource productivity, the material cycle, dematerialization, factor 4 and factor 10, MIPS, ecological rucksack, TMR (Domestic and Foreign TMR), rebound effect and sell function.
- Describe and discuss the role of technology in society.
- Identify and analyze front end technologies in different technological spheres and analyze technological improvements in accordance to the sustainability aspects.
- Analyse the driving forces behind technological change.
- Search for scientific literature in the subject areas of the course from the Internet and in libraries and use it as reference materials for a written report / case study.
- In a written report / case study analyse and discuss different subjects connected to "sustainable technologies" in the areas of energy and transportation, water and sanitation in both the industrialized and the developing world.
- Show references and bibliography in a written report / case study.
- Give an oral presentation to a written case study.

Course contents

In this course we discuss different concepts in changing our material and energy requirement. The concepts of technological change, eco-efficiency, dematerialization, resource productivity, factor 4 and factor 10 are analysed.

Disposition

Introductory lectures, one home assignment and one case study seminar are included.

Course literature

The literature will be presented in connection with the start of the course.

Examination

- ÖVN1 Exercise, 3.0 credits, grading scale: A, B, C, D, E, FX, F
- ÖVN2 Exercise, 3.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
