

SH2611 Small Reactors 6.0 credits

Små reaktorer

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

The official course syllabus is valid from spring semester 2027 as decided by the Director of First and Second Cycle Education. Decision date:2026-08-14

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Engineering Physics

Specific prerequisites

Course SH2600 Reactor Physics, or corresponding knowledge

English B / English 6

Intended learning outcomes

After the course, the participants should be able to

1. Design a small reactor for production of electricity and heat
2. Analyse the safety performance of small reactors
3. Assess the economics for commercial operation of small reactors

Course contents

Fuel economy in small reactors: Enrichment and control rod worth

Passive safety in small reactors: Reactivity feedback, natural convection and decay heat removal

Severe accidents: Source term and radiological impact on environment

Cost analysis: Capital cost, fuel cost and costs for operation and maintenance

Examination

- TENA - Exam, 4.0 credits, grading scale: A, B, C, D, E, FX, F
- SEMA - Seminarium, 2.0 credits, grading scale: P, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
