

# SI1155 Theoretical Physics 6.0 credits

## Teoretisk fysik

This is a translation of the Swedish, legally binding, course syllabus.

If the course is discontinued, students may request to be examined during the following two academic years

## Establishment

Course syllabus for SI1155 valid from Spring 2018

## Grading scale

A, B, C, D, E, FX, F

## Education cycle

First cycle

## Main field of study

Technology

## Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

## Intended learning outcomes

After completing the course the student shall be able to

- Describe the areas, problems and methods of theoretical physics.
- Set up important models in quantum physics and statistical physics and describe applications where the models apply.
- Formulate and solve physical problems with methods that are covered in the course.
- Use approximate methods and numerical methods to solve quantum mechanical problems and assess their advantages, disadvantages and accuracy.
- Perform derivations of important results in the course.

## Course contents

- Overview of theoretical physics areas, problems, applications and unifying concepts.
- Analytical mechanics and the connection to quantum mechanics.
- Postulates of quantum mechanics and probability interpretation.
- Analysis of important problems with solution of the Schrödinger equation.
- Mathematical formulation of quantum mechanics.
- Approximate methods with examples.
- Numerical solutions.
- Many-particle systems, fermions and bosons.
- Introduction to statistical mechanics.
- Applications in nanostructures, quantum computers, etc.

## Specific prerequisites

Recommended prerequisites: Knowledge in physics corresponding to Modern physics (SH1014) and Engineering mathematics (SI1200).

## Course literature

Selected by the department

## Examination

- LAB1 - Laboration, 1.0 credits, grading scale: P, F
- TEN1 - Examination, 5.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

# Other requirements for final grade

A-E grade on TEN1 and Pass LAB1

## Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
