

SK2401 Electro Optics 6.0 credits

Elektrooptik

This is a translation of the Swedish, legally binding, course syllabus.

Establishment

Course syllabus for SK2401 valid from Autumn 2010

Grading scale

A, B, C, D, E, FX, F

Education cycle

Second cycle

Main field of study

Physics, Engineering Physics

Specific prerequisites

For external students the following are required: 120 credits within natural sciences and engineering or corresponding knowledge and documented proficiency in English B or corresponding knowledge.

Recommended previous knowledge:
SK2300 (Optical physics, 6 credits) or equivalent.

Language of instruction

The language of instruction is specified in the course offering information in the course catalogue.

Intended learning outcomes

After the course, the student should understand and have knowledge in laser tools, electro-optics and non-linear optics to the extent that the student with necessary literature is able to solve practical or theoretical problems within the given fields.

Course contents

Gaussian beams, optical resonators and rate equations. Types of lasers. Electro-optic and acousto-optic modulation. Non linear optical formalism and parametric processes. Higher order nonlinearities and phase conjugation. Q-switching and mode-locking. Waveguiding.

Course literature

A. Yariv, Quantum electronics, John Wiley & Sons (the edition used will be announced on the course home page at least four weeks prior to the start of the course).

Examination

- TEN1 - Hand in Task, 6.0 credits, grading scale: A, B, C, D, E, FX, F

Based on recommendation from KTH's coordinator for disabilities, the examiner will decide how to adapt an examination for students with documented disability.

The examiner may apply another examination format when re-examining individual students.

If the course is discontinued, students may request to be examined during the following two academic years.

Other requirements for final grade

Examination by hand in assignments (INL1; 6 credits, grading scale A-F).

Ethical approach

- All members of a group are responsible for the group's work.
- In any assessment, every student shall honestly disclose any help received and sources used.
- In an oral assessment, every student shall be able to present and answer questions about the entire assignment and solution.
