Programme syllabus

Degree Programme in Electrical Engineering
Civilingenjörsutbildning i elektroteknik
300.0 credits

Valid for students admitted to the education from autumn 08 (HT - Autumn term; VT - Spring term).

This is a translation of the Swedish, legally binding, programme syllabus.

Programme objectives

For a Master's Degree in Electrical Engineering, a student must fulfill the goals that are specified in the Swedish Higher Education degree ordinance for a Master of Science degree in engineering (civilingenjör).

The programme’s aim

Electrical Engineering education is comprised of basic mathematics, natural science and their technical applications. The study programme offers a broad knowledge base which can be applied within widely varying fields.

Knowledge and understanding

An engineer graduating from the Degree Programme in Electrical Engineering must:

1. have knowledge of the scientific foundation and proven experience of electrical engineering.

2. be able to apply a creative and critical work approach in order to (within a given framework) formulate and solve problems with adequate methods and tools.

3. be able to analyse electrical engineering problems through a system’s perspective, with a holistic viewpoint of technical systems and their lifecycles; from the idea and needs to specifications, development, manufacturing, operation and decommissioning processes.

4. exhibit the insight that problem-solving takes its point of departure in needs and functionality, with regard to business conditions, environment and society.

Skills and abilities

An engineer graduating from the Degree Programme in Electrical Engineering must:
5. have the ability to independently apply mathematics and science within the discipline of electrical engineering.

6. have mastered and be able to independently apply significant relationships within electrical engineering as well as to be able to formulate, analyse and solve complex electrical engineering problems.

7. be able to analyse technical problems from a systems perspective from the idea/need through its specification, development, manufacturing and operation.

8. exhibit ample ability in engineering-related contexts to be able to communicate verbally and in writing with different target groups in Swedish and English, and to be able to discuss the conclusions as well as the knowledge and argumentation that form the basis for such.

9. exhibit the ability to co-operate, plan, lead and organise.

10. be able to follow and utilise developments in knowledge within electrical engineering and to be aware of the primary features of current research and development in the field of technology.

**Ability to make judgements and adopt a standpoint**

An engineer graduating from the Degree Programme in Electrical Engineering must:

11. exhibit insight into the possibilities and limitations of the technology, its role in society, and mankind’s responsibility of how it is used nationally and internationally.

12. exhibit an understanding of and respect for the significance of how electrical engineering affects people, society in general, and the environment with respect to limited natural resources.

13. exhibit an awareness of the ethical aspects of research and development work.

**KTH’s local degree ordinance**

The goal of the Master of Science of Engineering Degree is to create and develop the engineering competency that is needed in order to effectively and efficiently exploit technology in the service of both the individual as well as society in general. A Master of Science in Engineering Degree is awarded after the educational programme has been completed. The programme is designed such that students, upon receiving the degree, have fulfilled the national requirements for the degree and completed courses totalling 300 credits.

All information about the degree requirements for the Master of Science in Engineering degree, student Bachelor’s Degree, and respective masters degrees can be found in KTH’s local degree ordinance.

http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/examina/1.27227

**Extent and content of the programme**
The Master of Science in Engineering programme in Electrical Engineering consists of 300 credits, which at normal study speed corresponds to five years of full time study. The programme’s first three years are in the first cycle and can be concluded with a technology Bachelor’s Degree, if the student applies to do so. The last two years are concluded in the second cycle and can be concluded with a technology Master’s Degree.

The first three years of the programme are mainly in Swedish, with certain English literature included. The last 2 years are mainly in English.

**Eligibility and selection**

For eligibility requirements and selection methods, see KTH’s admission policy,

http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/antagning/1.27186

**Implementation of the education**

**Structure of the education**

The study year for KTH’s education is divided into four periods. Every study period is followed by an exam period. For details about the structure of the academic year, see KTH-handboken.

The program for Electrical Engineering during the first three years consists mainly of obligatory courses in mathematics, electrical systems and physics. The fourth year, the student chooses from several available specialisations in conjunction with a Master’s program. By following one of these programs, the student will be eligible for both a degree in Electrical Engineering and also a Master’s degree in the chosen specialty.

The study programme is designed so that after 3 years, the student will have the possibility to acquire a Bachelor degree in order to, if desired, continue his/her studies in another program at KTH (other than the suggested specializations) or another University in Sweden, abroad, or pursue a career.

**Courses**

The programme is course-based. Lists of courses are included in appendix 1.

The programme is composed of compulsory, conditionally elective and elective courses. The compulsory, conditionally elective and recommended elective courses are defined for every study year and specialization in the teaching and time schedule. The goals, prerequisites, contents and examination requirements for each course can be found in the Course and Program Directory on the KTH student web.

**Grading system**

Courses in the first and the second cycle are graded on a scale from A to F. A-E are passing grades, A is the highest grade. The grades pass (P) and fail (F) are used for courses under certain circumstances.

Since the grading systems differ very much between different countries, the grades from studies abroad will not be transferred to the KTH grading system.
Conditions for participation in the programme

Semester enrollment

A precondition for being admitted to participate in studies at KTH is that the student enroll for the semester. Registration on the "Mina sidor" at KTH's Web site, is only possible at beginning of the term.

Registration at the program

Registration for the program shows that you intend to study the program during the specified semester. It is essential for you to register for courses belonging to the program.

Students who are not promoted to next level can not make registration for the program, therefore they have to make an individual study plan with their counselors.

Conditions for being promoted to the next level

The following promotion requirements apply in order to participate in the next level of the education.

From study year 1 to study year 2: A total of at least 45 ECTS credits from study year 1 must be completed.

From study year 2 to study year 3: A total of at least 90 ECTS credits from study years 1 and 2.

From study year 3 to study year 4: A total of at least 150 ECTS credits from study years 1-3.

Selection of masterprogram

Selection of masterprogram will be done in the spring year 3.

Leave of Study means that the student does not participate in courses during at least one term. Approved leave of study gives the student the right to return to the studies at a given point in time. During the leave of study, the student is able to complete courses and participate in exams in unfinished courses.

The application for leave of studies is submitted to the EES student office, which approves or denies the application. When the student intends to return to the studies, a new application must be submitted.

Course registration

Registration of a course assumes course selection in Ladok. The course selection process can be done on the web or through the student’s programme office. Registration of a course is done by the laboratory giving the course. Registration must be finished by around three weeks after the course’s start. If the student decides to withdraw from a course, the student must notify the laboratory of this.

Recognition of previous academic studies
According to the Swedish Higher Education Ordinance, a student who has gone through certain first-cycle study courses and study programmes with a passing result has the right to have such credit recognised for a corresponding course of education at another institution of higher education. The Director of Undergraduate Studies (Grundutbildningsansvarig) at the School of Electrical Engineering will make the decisions concerning recognition of fulfilled courses. Awards of credits for parts of courses may be decided upon by an examiner.

The application for recognition should be submitted to the programme office using the form intended for that purpose.

For further information on recognition of previous academic studies, see the KTH:s regelverk

http://intra.kth.se/regelverk/utbildning-forskning/grundutbildning/prestationer/1.27200

**Studies abroad**

KTH has agreements with over 250 universities around the world providing opportunities to study abroad. Exchange studies involve a student exchanging part of their time at KTH for time at another university abroad, this normally being done during the third, fourth or fifth academic year.

**Degree project**

**Bachelor level**

A degree project of 15 ECTS credits Bachelor of Science is done during study year 3. To begin the bachelor thesis project at least 120 credits must have been completed.

**Masters level**

In the 5th year, a degree project must be done corresponding to a course of 30 credits which implies around 5 months of full-time studies. A major part of the studies, at least 240 credits, must have been completed, with a maximum of two foundation courses remaining uncompleted before the degree project is commenced.

The degree project should be performed individually or if special circumstances occur, together with another student, and the subject at hand should be an in-depth study within the area of technology for which the degree is being prepared. The degree project is graded according to the A-F scale, using the three bases for assessment common to all grading at KTH: the engineering and scientific content, the process, and the presentation.

**Degree**

A Master of Engineering Degree is awarded after the educational programme has been completed.

**Titel of Degree**

1) "Degree of Bachelor of Science"
2) "Master of Engineering – Degree Programme in Electrical Engineering".

3) "Masters degree of Science"

KTH's local degree ordinance can be found in its entirety in the KTH:s regelverk:
